## Introduction

Each year the National Center for Education Statistics (NCES) of the U.S. Department of Education collects a wide range of data from every post-secondary educational institution in the nation that participates in any federal student financial aid programs. Data on college enrollment, completions, graduation rates, staffing, college costs, prices, and finances are reported by colleges and universities across the nation. The Integrated Post-Secondary Education Data System (IPEDS) data collection method used to measure this array of post-secondary access and outcomes measures is composed of a set of standardized reporting materials that include well- defined concepts and measures that are used by colleges to prepare their IPEDS submissions to NCES.

One of the major data elements collected by the IPEDS program is information on post- secondary degrees and certificates awarded by colleges and universities across the U.S. each year. In effect, IPEDS ‘completions’ serve as a census of all post-secondary awards granted in the nation each year. IPEDS not only counts the total number of degrees and awards granted by each college and university in the nation, but also captures information about the type (degree or certificate) and level (associate’s, bachelor’s, and so on) of the degree.

Among the most important features of IPEDS completion data from the perspective of understanding labor supply responses to changing labor demand conditions is that the data on completions is also reported by major field of study for each award type and level. College and university catalogues vary markedly in the way they label and characterize a major field or course of study. In order to better achieve comparability in reporting college completion awards by field of study, the IPEDS completion reporting system requires colleges to report completions using the Classification of Instructional Programs (CIP). The CIP system is a hierarchical taxonomy of major fields of instruction that includes specific descriptive definitions for hundreds of fields and serves as a standard by which data are both reported and analyzed.

Completions data organized by the CIP structure can be connected to O\*NET occupational data that describe the ability, knowledge, skill, and behavioral proficiency requirements of the range of occupations found in the American economy. Indeed, analysts

have successfully used demand side payroll employment data derived from the U.S. Bureau of Labor Statistics business establishment surveys (including the Current Employment Statistics Survey, the Quarterly Census of Employment and Wages, and the Occupational Employment Statistics Survey programs) to measure institutional supply response to changing labor market demand conditions in specific industry-occupational/major field of study labor market segments.

## The Level and Sector Structure of Post-Secondary Completions in Greater Long Beach

The Greater Long Beach region’s post-secondary system is large and robust at the undergraduate level which is composed of a mix of public and private for-profit and nonprofit institutions in the region. Private schools granted almost 5,600 degrees and certificates during 2016, equal to just over one quarter of all awards granted by institutions located in the area. The five public colleges offering programs in the region granted over 15,100 degrees and

**Table 1:**

Source: Integrated Post-Secondary Data System, National Center for Education Statistics

certificates during 2016. Bachelor’s degrees accounted for 8,900 awards during 2016, 43 percent of the total. Areas colleges granted 4,100 associate degree (20 percent of all awards) and master’s degrees accounted for about 15 percent of all awards. The overwhelming share of these degrees were granted by area public colleges. Local post-secondary institutions awarded

4,500 certificates from programs of varying durations accounting for 22 percent of total awards in the area.

Private post-secondary institutions, especially those in the private for-profit sector, were primarily engaged in awarding certificates in specialty areas. About one-half of private post-secondary awards were at the certificate level, with most of these certificates in programs one-to two-years in duration. Private colleges were unlikely to award an associate's degree, with just 6 percent of all private sector awards granted in Greater Long Beach at that degree level. Private college degree awards are more concentrated at the bachelor's and master's degree levels. About 23 percent of all private sector awards were at the master's level, while bachelor's degrees accounted for 21 percent of all awards by private colleges.

Public colleges, although small in number, (there are just five: El Camino College-Compton Center, Cypress College, Los Angeles Harbor College, Long Beach City College, and California State University-Long Beach) accounted for 75 percent of all post-secondary awards in the Greater Long Beach region. Public colleges were much more likely to grant degree awards than their private counterparts. Of the 15,000 plus awards granted by public colleges and universities in 2016, less than 15 percent were certificate level awards.

The public institutions in the region are composed largely of two-year colleges offering certificates and associate's degrees, in addition to Cal State Long Beach, which grants substantial numbers of degrees awards at the associate's, bachelor's, and master's degree level. We found that local public institutions awarded a total of 3,800 associate's degrees during 2016, accounting for one-quarter of all public college and university awards. A total of 7,800 bachelor's degree awards were granted during 2016, accounting for about one-half of all public sector awards. At the Master's degree level, a total about 1,700 degrees were awarded during 2016, accounting for about 11 percent of all public sector awards in that year.

## The Program of Study Structure of Degree and Certificate Completions in Greater Long Beach

Less than one-year certificate programs are short duration awards programs organized by federal and state recognized post-secondary educational institutions. In the case of Greater Long Beach, as we mentioned above, a considerable share of these awards are granted by private institutions. Individual programs of study are often themselves high turnover in nature. That is,

post-secondary institutions frequently alter their mix of programs depending in part on local demand for certificates in various specialized areas. Often schools start-up and shut-down programs as student demand changes. Since the start up and shut down costs of many certificates are quite modest, institutions have a high degree of flexibility in changing certificate offerings and so are able to quickly respond to change in market conditions. The data in Table 1 include a substantial number of programs of study with zero completions. These represent fields in which an award had been offered in the previous six year and are thus indicative of the high pace of change in the program mix at this level.

The short-term certificate awards in Greater Long Beach are heavily concentrated in the health fields, most commonly in nurse assistant and home health aide occupations. About four in ten certificate awards were in the health support fields of study. Business programs, largely focused on clerical and office skills development, accounted for about 12 percent of awards. Short term awards in mechanic and repair technologies, which can run a gamut of training activities such as small engine repair, auto maintenance, and some machine trades, accounted for 11 percent of all completions. Engineering technologies and computer and information tech together accounted for about 10 percent of short-term program certificate awards

The Greater Long Beach post-secondary institutions gave a surprising large number of one- to two-year certificate awards during 2016. More than one-half of all these awards were in health-related fields. At this level, this means awards to students were in programs such as licensed practical nurse, licensed vocational nurse, occupational and physical therapy assistants, medical assistants, and pharmaceutical assistants to name a few health specialty areas.

The one- to two-year certificate program mix has a substantial number of completions in areas that may lead to employment in skilled and semi-skilled blue-collar occupations. Almost one in five one- to two-year certificate awards in the region were in either construction trades or mechanic/repair technologies. A surprising number (250) of one- to two-year certificate awards were granted in liberal arts. This may be the product of an increasingly popular strategy of “stackable credential” awards that provide a credential as part of a pathway to a higher certificate or degree award.

Associate's degree awards are largely awarded by the five public colleges and universities in the Greater Long Beach region. A substantial portion of those awards are granted in liberal arts, social sciences, and humanities. About one-half of all associate's degree awards in the region are in these generalist fields of study and students completing degrees in these fields often have ambitions to continue their education at a four-year college. With respect to occupational preparation, the healthcare fields are the dominant area of degree award. About one in six associate's degree awards are granted in health fields, often in nursing and related occupational specialties. More than 500 business and management degrees were awarded at the associate's degree level during 2016, accounting for about one in seven degree awards. Culinary programs awarded a total of 104 degrees. Very few associate degree awards were granted in any of the blue collar skilled or semi-skilled areas. Engineering and computer science technology fields associate degree awards were granted to just 55 students, about 1 percent of all degree awards during 2016.

A total of more than 8,900 bachelor's degrees were awarded by colleges and universities located in the Greater Long Beach area. Most of these degrees were awarded by Cal State-Long Beach. About 3,800 of these awards were in the liberal arts, social sciences, and humanities fields, accounting for nearly four in ten bachelor's degree awards in the region. Business, management, marketing and support services programs had 1,700 awards during 2016 - about one-fifth of the region's total bachelor's degree awards. Health professions, including bachelor's programs in nursing, awards were granted to more than 1,100 students or about 13 percent of all awards.

In the mathematics-oriented fields, we found that about 760 engineering and engineering technology bachelor's awards were granted in 2016 by Greater Long Beach colleges and universities. Computer science degree awards were granted to 220 students representing about 2 percent of all degree awards. Only a small number of bachelor's degrees were awarded in mathematics and the physical sciences. A total of just over 100 degrees in math and the physical sciences bachelor's degrees were awarded during 2016 by local colleges and universities—just 1 percent of the total of all bachelor's degree awards.

## Conclusion

Long Beach is a large city, and Greater Long Beach constitutes a substantially sized metropolitan region, yet the relative size of the local post-secondary system is small relative to the size of the area's population and labor force. While it is likely adequate to meet the educational needs of local residents, it is not capable of attracting and retaining large numbers of students from other parts of the state, nation and world. Cities with higher education institution with a broad geographic reach play a central role in creating high skilled labor supply in metropolitan areas. Cities with a higher education system capable of attracting large numbers of students from outside the region have proven to play an important role in business location decisions, at least for those firms with high levels of demand for persons with college credentials. Absent a higher education system to modulate labor supply to the college labor market, Long Beach and its environs will face greater difficulties in job creation and business location than cities of similar size, but with a higher education system with the capacity to attract and retain students from outside the region.

Cal State at Long Beach is the primary provider of bachelors and graduate degrees in the region. Cal State awarded more than 6,800 bachelor's degrees in 2016, equal to three quarters of all such degree awards within the region. The remaining bachelor's degree awards degrees were spread over a number of local private for profit and non-profit colleges. Four local public two-year institutions granted almost 3,700 associate's degrees accounting for more than 90 percent of all such degree. The private higher education system in the region is largely confined to certificate programs.

At the certificate level, we found a high, but not unexpected pace of program and even institutional turnover. The bulk of certificate programming is in the health care area and given the growth in ambulatory health care employment this concentration is expected. Ambulatory care organizations employ large numbers of workers in health assistant and health technology occupations that require certifications for employment. Business clerical is also an important area of certificate awards at the post-secondary level. Graduates of these programs with solid office skills can expect solid job opportunities in a wide range of positions (including the healthcare industry) across the city and region.

The blue-collar certificate programs are of special interest as parts of the areas manufacturing sector grow. Employers have built connections to some individual certificate programs most notably at Cypress College, but these programs are small and employers we spoke with expressed a desire for an expansion of these programs. Creating such an expansion is not easy. First, student demand must be present for a program to expand, and some of the employers we spoke with discussed the lack of interest among young people in employment in manufacturing. The costs of creating and expanding solid maintenance, repair, and machining programs are high, and colleges are typically reluctant to make large capital investments in cyclically unstable occupations that characterize the construction and manufacturing sector. The best examples of efforts to expand these programs have involved business education partnerships that share the risk of such investment between the college and local employers. Apprenticeship programs are also a highly effective way to develop these skilled blue-collar proficiencies while keeping capital costs in check.

The tables provided in Appendix A below examine trends in certificate/degree awards by level and sector for each post-secondary educational institution in the Greater Long Beach region. These data were produced to assist local workforce development officials to gain insight into the nature of undergraduate programs offered in every college in the region and to serve as a basis to build relationships between the area's higher education providers and the local business community.
